Empower UX transformation with digital BI

Demand forecasting using big data and store inventory analysis allowed tire retailer to define optimal inventory

Context

Leading B2B e-commerce company faced a complex supply chain experience issues

Aim of the project was to provide the right product, for the right company, at the right time

Approach

I assisted in creating an advanced UX predictor on micro market level using precise survey data points
- Quantitative: E.g., customer rating, no. of reviews, business model, group
- Qualitative : E.g., expert interview, user research, market research, process design
Impact

6-12%
Estimated sales increase

Data driven optimized user experience without historic data

Helped a leading e-commerce company to establish experience driving factors and quantify consumers' perception of experience
